PROTECT IDENTITIES • SECURE TIER 0 • STOP CREDENTIAL ATTACKS

MULTI-FACTOR AUTHENTICATION DEPLOYMENT

The Reality: Attackers Don't Hack In — They Log In

Compromised credentials remain the #1 initial access vector in ransomware and identity attacks. A single compromised admin account can lead to full domain compromise in minutes.

What is Multi-Factor Authentication (MFA)?

Multi-Factor Authentication requires additional verification beyond the password.

Something you know
Password / PIN

Something you have
FIDO2 security key / Authenticator

Something you are
Biometrics

Why typical MFA Deployments fail?

Many organizations protect cloud logins but leave Active Directory and privileged accounts, the crown jewels of hybrid environments, exposed. MFA in most cases is just too expensive for the customers for full coverage...

The Adminize Difference – MFA Designed for Active Directory & Tier 0 Protection

We deliver identity security architecture combining:

- ✓ Identity-centric Zero Trust
- ✓ Active Directory Tiering
- ✓ Privileged Access Workstations (PAW)
- ✓ Phishing-resistant authentication
- ✓ Just-IN-Time access (JIT) - no standing Domain Admin privileges

BY ADMINIZE OY – LEADING MICROSOFT SECURITY SPECIALISTS

Architecture & Design & Implementation

We deliver:

✓ Active Directory + integration for protecting Tier 0 assets
✓ Phishing-resistant MFA
✓ Training to use Secure admin workflows
✓ Just-IN-Time access (JIT) - no standing Domain Admin privileges

Tier 0 Privileged Access Protection

We implement MFA for Domain Admins, Enterprise Admins, Schema admins.

Unique Licensing Advantage

Our package includes perpetual MFA licenses purchased once with no recurring costs.

Digital Sovereignty & Offline Operation

Our MFA works even without internet and does not rely on foreign cloud datacenters.

Business Outcomes

Protection against credential theft, secured Tier 0, reduced ransomware risk and compliance readiness.

PRICING

Pricing for MFA-project deployment is 5000€. Pricing does not include taxes.
